DETAILED ACTION

Allowable Subject Matter

1. Claims 1-8 are allowed.
2. The following is an examiner's statement of reasons for allowance:

With respect to the independent claim 1, prior art fails to disclose or make obvious, in combination with other recited features of the claim limitations, an electron beam irradiation device for irradiating an electron beam to a belt-shaped irradiated object while making the irradiated object travel; an electron beam generating section which generates the electron beam and emits the electron beam to an outside from a transmission window part; an irradiation chamber adjacent to the transmission window part of the electron beam generating section; an oxygen cutoff section adjacent to the irradiation chamber on an upstream side in an irradiated object traveling direction, in which the belt-shaped irradiated object travels to be introduced to the irradiation chamber; an inert gas is blown to the irradiating surface side of the irradiated object, and oxygen in the air accompanying a vicinity of a surface of the irradiated object to flow in is shut off or diluted; and a blowing slit for the inert gas is provided on the surface side partition of the oxygen cutoff section, with a blowing opening thereof being not projected form or caved in the surface side partition of the oxygen cutoff section.

The key element of the applicant's invention, not disclosed in prior art but presented in the independent claim 1, is the belt-shaped irradiated object which is introduced to the irradiation chamber, the inert gas which is blown to the irradiating surface side of the irradiated object, oxygen in the air accompanying a vicinity of a surface of the irradiated object which flows in is

shut off or diluted, and a blowing slit for the inert gas is provided on the surface side partition of the oxygen cutoff section.

The dependent claims 2-8 are allowable by virtue of their dependence upon independent claim 1.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. S. Nakao (2006/0272579 A1) discloses an electron beam irradiation device capable of reducing quantity of inert gas consumed while maintaining oxygen concentration in an irradiation chamber.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
